Experimental Marine Biology

Experimental Marine Biology

Experimental Marine Biology consists of eight chapters dealing with the various disciplines of marine biology. This book aims to give insights into the problems and perspectives of each discipline, as well as point out new directions which research endeavors might most profitably follow.

This reference material starts with the basic topic about aquarium technique, specifically closed-system marine aquariums. This book then presents field experiments in marine ecology and describes marine organisms' behavior, physiology, endocrinology, biochemistry, and toxicology. The development in marine organisms is also discussed.

This work will be valuable to both interested students and experienced researchers in this field.
