Green Growth and Low Carbon Development in East Asia (Routledge Studies in Ecological Economics)

Green Growth and Low Carbon Development in East Asia (Routledge Studies in Ecological Economics)

The concept of green growth, coupled with one of green economy and low carbon development, is a global concern especially in the face of the multiple crises that the world has faced in recent years - climate, oil, food, and financial crises. In East Asia, this concept is regarded as the key in transforming cheap-labour dependent, export-oriented industries towards a more sustainable development.

Green Growth and Low Carbon Development in East Asia examines the beginnings of low carbon, green growth in practice in East Asia and how effectively it has directed East Asian nations, especially Korea, China and Japan, to put environment and climate challenges as the core target zone for investment and growth. Special focus is paid to energy and international trade - areas in which these nations compete with pioneered nations of Europe and the United States to develop renewable energy industries and enhance their international competitiveness.

On the basis of the lessons learned in East Asia, together with a comparison of Russia, this book discusses the applicability and limitations of this developmental approach taken by the developing nations and resource-rich emerging economies, including the conditions and contexts in which nations are able to transition into sustainable development through the use of low carbon, green growth strategies.
